Executive Summary

Student Information Systems (SIS) serve as the digital backbone of educational institutions, managing everything from enrollment and academic records to financial aid and graduation requirements. The market is ripe for disruption with legacy systems that lack modern UX, mobile-first design, and AI-powered insights that today's students and administrators expect.

Core Features

#	Feature	Description	Priority	Complexity
1	Student Registration & Enrollment	Online course registration with real-time seat availability, prerequisites checking, and schedule conflict detection	must-have	medium
2	Academic Records Management	Digital transcripts, grade recording, GPA calculations, and academic history tracking	must-have	medium
3	Student Profile Dashboard	Centralized view of student information, courses, grades, financial status, and communications	must-have	low
4	Faculty Grade Management	Grade entry, attendance tracking, and academic progress monitoring tools for instructors	must-have	medium
5	Course Catalog & Scheduling	Dynamic course catalog with scheduling tools, room assignments, and capacity management	must-have	high
6	Financial Aid Processing	FAFSA integration, scholarship management, and financial aid disbursement tracking	must-have	high
7	Tuition & Billing Management	Student billing, payment processing, payment plans, and account management	must-have	medium
8	Document Management	Secure storage and retrieval of transcripts, diplomas, and official documents	must-have	medium
9	Reporting & Analytics Dashboard	Enrollment reports, academic performance analytics, and compliance reporting	must-have	medium
10	Role-Based Access Control	Granular permissions for students, faculty, staff, and administrators	must-have	medium
11	Mobile Application	Native mobile apps for iOS/Android with core SIS functionality	important	medium
12	Communication Center	Integrated messaging, announcements, and notification system	important	low
13	Degree Audit & Planning	Automated degree requirement tracking and graduation planning tools	important	high
14	Attendance Tracking	Digital attendance recording with integration to academic standing policies	important	low
15	Transfer Credit Evaluation	Tools for evaluating and applying transfer credits from other institutions	important	medium
16	Waitlist Management	Automated waitlist processing and notification system for course enrollment	important	medium
17	Academic Calendar Integration	System-wide calendar management with add/drop dates, holidays, and deadlines	important	low
18	Parent/Guardian Portal	Controlled access portal for parents to view student progress and financial information	nice-to-have	low

#	Feature	Description	Priority	Complexity
19	Multi-Language Support	Interface localization and multi-language document support	nice-to-have	medium
20	API Gateway	RESTful APIs for third-party integrations and custom applications	important	medium
21	Data Import/Export Tools	Bulk data migration tools and scheduled export capabilities	important	medium
22	Audit Trail & Compliance	Complete audit logs for FERPA compliance and data integrity monitoring	must-have	medium

Advanced / Differentiating Features

#	Feature	Description	Priority	Complexity
1	AI-Powered Academic Advisor	Machine learning recommendations for course selection, career paths, and academic interventions	innovative	high
2	Predictive Analytics for Student Success	Early warning systems using ML to identify at-risk students and recommend interventions	innovative	high
3	Blockchain Credentials	Tamper-proof digital diplomas and certificates using blockchain technology	innovative	high
4	Real-time Collaboration Tools	Integrated video conferencing, document collaboration, and virtual study groups	important	medium
5	Smart Scheduling Optimization	AI-driven course scheduling that optimizes room utilization and minimizes conflicts	important	high
6	Personalized Learning Pathways	Customized academic plans based on student goals, performance, and career aspirations	innovative	high
7	Integration Hub	Pre-built connectors for popular LMS, library, and third-party educational tools	important	medium
8	Voice Assistant Integration	Voice-powered queries for grades, schedules, and campus information	nice-to-have	medium
9	Gamification Engine	Achievement badges, progress tracking, and engagement rewards for academic milestones	nice-to-have	medium
10	Advanced Financial Analytics	Predictive modeling for enrollment revenue, financial aid optimization, and budget forecasting	important	high
11	Automated Workflow Engine	Visual workflow builder for automating approval processes and administrative tasks	important	high
12	Multi-Institution Support	Single platform supporting multiple campuses, consortiums, and institutional partnerships	important	high
13	Real-time Data Synchronization	Event-driven architecture ensuring instant updates across all system components	important	medium

Innovative Ideas (Beyond Current Market)

- AR/VR campus tours integrated with course catalog to help students visualize their academic journey
- AI-powered chatbot that can answer complex policy questions and guide students through procedures
- Social learning features that connect students with similar academic interests and study groups
- Dynamic pricing for courses based on demand, similar to airline pricing models
- Integration with job market data to show real-time employment outcomes for different majors
- Micro-credentialing system that breaks degrees into stackable, industry-relevant certifications
- Peer tutoring marketplace with built-in scheduling and payment processing
- Mental health and wellness tracking with integration to campus counseling services
- Carbon footprint tracking for campus activities with sustainability gamification
- Alumni network integration with mentorship matching and career services
- Smart campus integration with IoT sensors for real-time facility usage and environmental data

Data Model & API Overview

Key Entities: • Students • Faculty • Staff • Courses • Enrollments • Grades • Transcripts • Programs • Requirements • Terms • Sections • Rooms • Buildings • Payments • Financial_Aid • Documents • Communications • Audit_Logs • Institutions • Departments	API Endpoint Groups: • /auth • /students • /faculty • /courses • /enrollments • /grades • /transcripts • /payments • /financial-aid • /documents • /communications • /reports • /admin • /integrations • /notifications
---	--

Monetization Strategies

- Per-student annual licensing fees
- Tiered SaaS subscriptions based on institution size and features
- Implementation and professional services fees
- Premium feature add-ons (AI analytics, advanced integrations)
- Training and certification programs
- Third-party integration marketplace with revenue sharing
- Data analytics and benchmarking services
- Mobile app premium features
- Custom development and consulting services

MVP Scope

Core student registration, basic grade management, student/faculty dashboards, essential reporting, and mobile-responsive design. Focus on one institution type (community college or small university) to validate product-market fit before expanding to larger, more complex institutions.

Competitive Landscape

Dominated by legacy players like Ellucian Banner, Oracle PeopleSoft, and PowerSchool, which offer comprehensive but often outdated user experiences. Newer entrants focus on specific niches but lack comprehensive coverage. Opportunity exists for modern, mobile-first platforms with superior UX and AI capabilities.

Key Metrics to Track

Monthly Active Users (MAU) | Student enrollment completion rates | Average session duration | Feature adoption rates | Customer satisfaction (NPS) | System uptime and performance | Support ticket volume and resolution time | Revenue per student | Churn rate | Time to value for new implementations

Go-to-Market Notes

Target mid-size institutions (5,000-15,000 students) dissatisfied with legacy systems. Emphasize modern UX, mobile-first design, and quick implementation. Partner with educational consultants and attend higher education conferences. Offer migration services and competitive pricing to win initial customers and build case studies.
